LIQUID ICE MELT quickly penetrates and dissolves snow and ice accumulations by lowering the freezing point of water. Special additives prevent ice from reforming and snow from adhering for hours. **LIQUID ICE MELT** spreads evenly across all surfaces to provide fast, effective deicing action while reducing product runoff. Its unique formula is non-toxic to plants and will not harm concrete, asphalt, wood or painted surfaces. To prevent painful falls, embarrassing and costly liability suits, use **LIQUID ICE MELT** every time it snows.

DIRECTIONS:

Coverage: 1 gallon per 500 - 750 square feet.

General Use: **LIQUID ICE MELT** is ready-to-use. **DO NOT DILUTE.** Spray, pour, or sprinkle liberally on surfaces covered with snow or ice. It will become diluted as it works, therefore reapplication may be necessary for heavy layers of ice, sleet, or during heavy rainfall.

To Treat Glazed or Glare Ice: Score ice in a vertical or horizontal manner to assure thorough penetration, rapid thaw, and prevent runoff. Pour **LIQUID ICE MELT** into the scoring and allow it to penetrate. Remove slush by shoveling.

Sand Application: Add 5 to 10 gallons per cubic yard of sand. Spread treated sand at the rate of 50,000 to 60,000 square feet per cubic yard.

WARNING: This product contains, or may contain, trace quantities of a substance(s) known to the state of California to cause cancer and/or reproductive toxicity.
